

Jupyter Notebook Execution Report

Name: Your Name

Date: April 29, 2026

Cell 1: ■ Code

```
import pandas as pd
import numpy as np
import matplotlib.pyplot as plt
import seaborn as sns
```

Cell 2: ■ Code

```
train_features = pd.read_csv('../data/training_set_features.csv')
train_labels = pd.read_csv('../data/training_set_labels.csv')
test_features = pd.read_csv('../data/test_set_features.csv')
```

Cell 3: ■ Code

```
print(train_features.shape)
```

Output:

```
(26707, 36)
```

Cell 4: ■ Code

```
print(train_labels.shape)
```

Output:

```
(26707, 3)
```

Cell 5: ■ Code

```
print(train_features.head())
```

Output:

```
respondent_id  h1n1_concern  ...  employment_industry  employment_occupation
```
